

Trust and Identity Use Cases

A/Prof Steven McEachern

Director of Australian Data Archive

Project Lead, CADRE

AAF Trust and Identity BoF, eResearch 2022,
Brisbane

Partners

Common requirements for trusted identity information

- What information do sensitive data custodians or brokers need (from researchers) to determine how and/or whether to make sensitive data accessible to them and how do they monitor usage and outputs?
- What information do research environment managers need to provide to support researchers seeking to provide evidence of due diligence (to data custodians or brokers)?
- What information do researchers need to have collated and linked together so that they can produce historical records of their data usage, their affiliation, training, ethics approval, research experience, and scholarship (for data custodians or owners)?

ADA data access – identity and access requirements

- Identities of the requestor and data users
- Affiliation of requestor with other data requestors
- Affiliation with an organisation (academic, NGO, commercial, etc) or a research project
- Intended use of the data that drives the access request
- Provision of secure location for data storage and processing for the duration of the project

Ten to Men – Australian Institute of Family Studies

- Data Access Policy [PDF, 873 KB]
- Data Access Use T&C [PDF, 358 KB]
- Data Access Request Form [PDF, 1.2 MB]
- Data Access Amendment Form [PDF, 310 KB]

Part A: Access Request Details

Date of request	
Project Title	
Student Project	<input type="checkbox"/> Yes <input type="checkbox"/> No
Project Type	<input type="checkbox"/> Research project <input type="checkbox"/> Grant application <input type="checkbox"/> Other, specify: <input type="text"/>
Data Requested	<input type="checkbox"/> General release <input type="checkbox"/> Restricted release (complete Part E)
Linked administrative dataset requested (complete Part F)	<input type="checkbox"/> Yes <input type="checkbox"/> No

Note: More information about the conditions of these datasets can be found in the Data Access Policy.

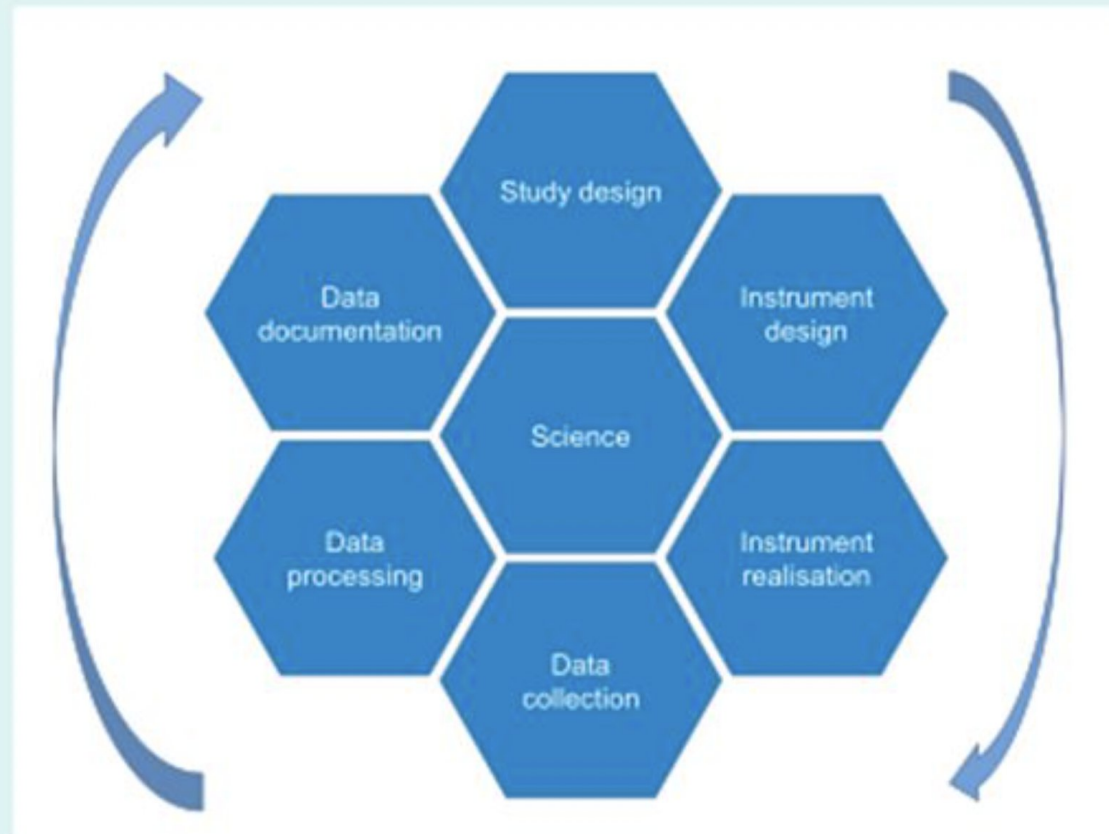

USER

This is the organisation, entity or individual that will enter into the Data Use Agreement entered into with AIFS. It is AIFS' preference to enter into an agreement with an organisation or entity (i.e. university) though AIFS will consider entering into an agreement with an individual.

Organisation	
ABN	
Postal Address	
City	
State	<input type="text"/>
Postcode	<input type="text"/>

Dataplace – implementation of the DAT Act

Dataplace will:

- improve efficiency by providing a **fit for purpose, consistent data request process** for the Australian Government and **help agencies manage** an increasing demand for data
- provide support and guidance through the data sharing process to build capability and make sure we are sharing data safely
- improve **visibility for all data sharing participants** about the **status of data activities**.
- As a whole of government platform, Dataplace will also **make it easier for agencies to collaborate** with each other on data requests, particularly **where there might be multiple custodians of a dataset**.

Thank You
