

2022 eResearch Workshop Abstract

<https://conference.eresearch.edu.au/2022-conference/2022-program/>

This workshop provided by the Australian Data Archive will familiarise participants with the CADRE Five Safes framework: Safe people; Safe data; Safe project; Safe settings and Safe output, plus two more; Safe organisations and Safe groups. Participants will learn how each of the Safes support and enable mediated access management to sensitive research data.

The CADRE Five Safes framework and new training resources will be introduced to help researchers and those who support research to better understand the process of requesting and accessing sensitive data; the role of new authorisation and authentication technologies, persistent identifiers and the Research Graph; and Australia's new Data Availability and Transparency Act (2022).

Learn about the Five Safes Framework – a guide to enabling researcher access to sensitive data (13:30 – 16:30)	
This workshop provided by the Australian Data Archive will familiarise participants with the CADRE Five Safes framework: Safe people; Safe data; Safe project; Safe settings and Safe output, plus two more; Safe organisations and Safe groups. Participants will learn how each of the Safes support and enable mediated access management to sensitive research data.
